

# LONG TERM CARE ELOPEMENT SOLUTION

## How it works:

SDC & Code Alert®  
partner to provide a  
reliable solution for patient  
wandering in LTC facilities.

- A** - resident wearing transmitter wristband gets too close to a monitored exit
- B** - antennas pickup the transmitter signal and the system locks the door
- C** - if the resident tries to open the door, an audible alarm from the Touchpad Exit Controller sounds
- D** - Central Station receives Alert Information
